

CONNECT

My **Smart**Window[®]
by IoT Fenster

**Press,
control
and relax.**

Connect devices are unique. Their efficiency, functionality and design make them perfect for improving quality of life, saving time and money, and increasing the value of your home.

CONNECTIVITY

Google Home

Control desde cualquier
parte del mundo

IFTTT

Lets you schedule
tasks

Improves
security

CONNECT features unique technology developed by IoT Fenster and electronics manufactured exclusively in Spain. What makes it different?

Continuous evolution thanks to OTA (Over-The-Air) technology. Through a centralised Device Management System and the Cloud, Connect devices receive regular firmware and software updates remotely, continuously and securely. This allows your smart devices and windows (Embedded Devices) to download and install the latest performance and security improvements directly, with no cables or service visits required, ensuring a product that never becomes obsolete and keeps improving over time.

APP MSW

EVERYTHING YOU NEED, ON YOUR PHONE

Raise and lower

Use the App to raise and lower your shutters.

Task scheduling

Choose when your shutters raise and lower automatically.

Manage user profiles

Create profiles, grant permissions and share devices.

Security alerts

The App sends security alerts if someone tries to force the window.

Air quality alerts

The App sends notifications showing air quality and when ventilation is needed.

Automatic updates

Your devices will always have the latest updates.

**Compatible with all Bluetooth-enabled
CONNECT products**

Black White Silver

Control reversal

Corrects motor direction and Twin Digital display if the wiring has been connected in reverse.

Lock mode

Disables the physical switch to prevent unwanted operation.

Local Wi-Fi network

If the internet connection is lost, the system can continue operating locally through the App.

Led RGB

Switch the device RGB LED lighting on or off.

MODELS FOR ROLLER SHUTTERS, ADJUSTABLE-SLAT SHUTTERS AND CASEMENT MOTORS.

Motor overheating protection

Smart monitoring protects the motor against overheating.

Obstacle detection

Detects obstacles during movement. Requires rigid security straps.

Twin Digital

Digital representation synchronised with the actual shutter position.

Scheduled actions without Wi-Fi

The App gives you remote access from anywhere, allowing you to create automated scenes for lighting and privacy. Devices store up to 5 scheduled actions and continue operating if the connection is lost.

YES, ALL AT ONCE!

Master mode lets you control all shutters from the switch of your choice. Simple, fast and all from one place.

My **SmartWindow**

CONNECT SMART

SMART CONNECTIVITY

Motor overheating protection

Smart monitoring protects the motor against overheating.

Obstacle detection

Detects obstacles during movement. Requires rigid security straps.

Twin Digital

Digital representation synchronised with the actual shutter position.

Lock mode

Disables the physical switch to prevent unwanted operation.

Local Wi-Fi network

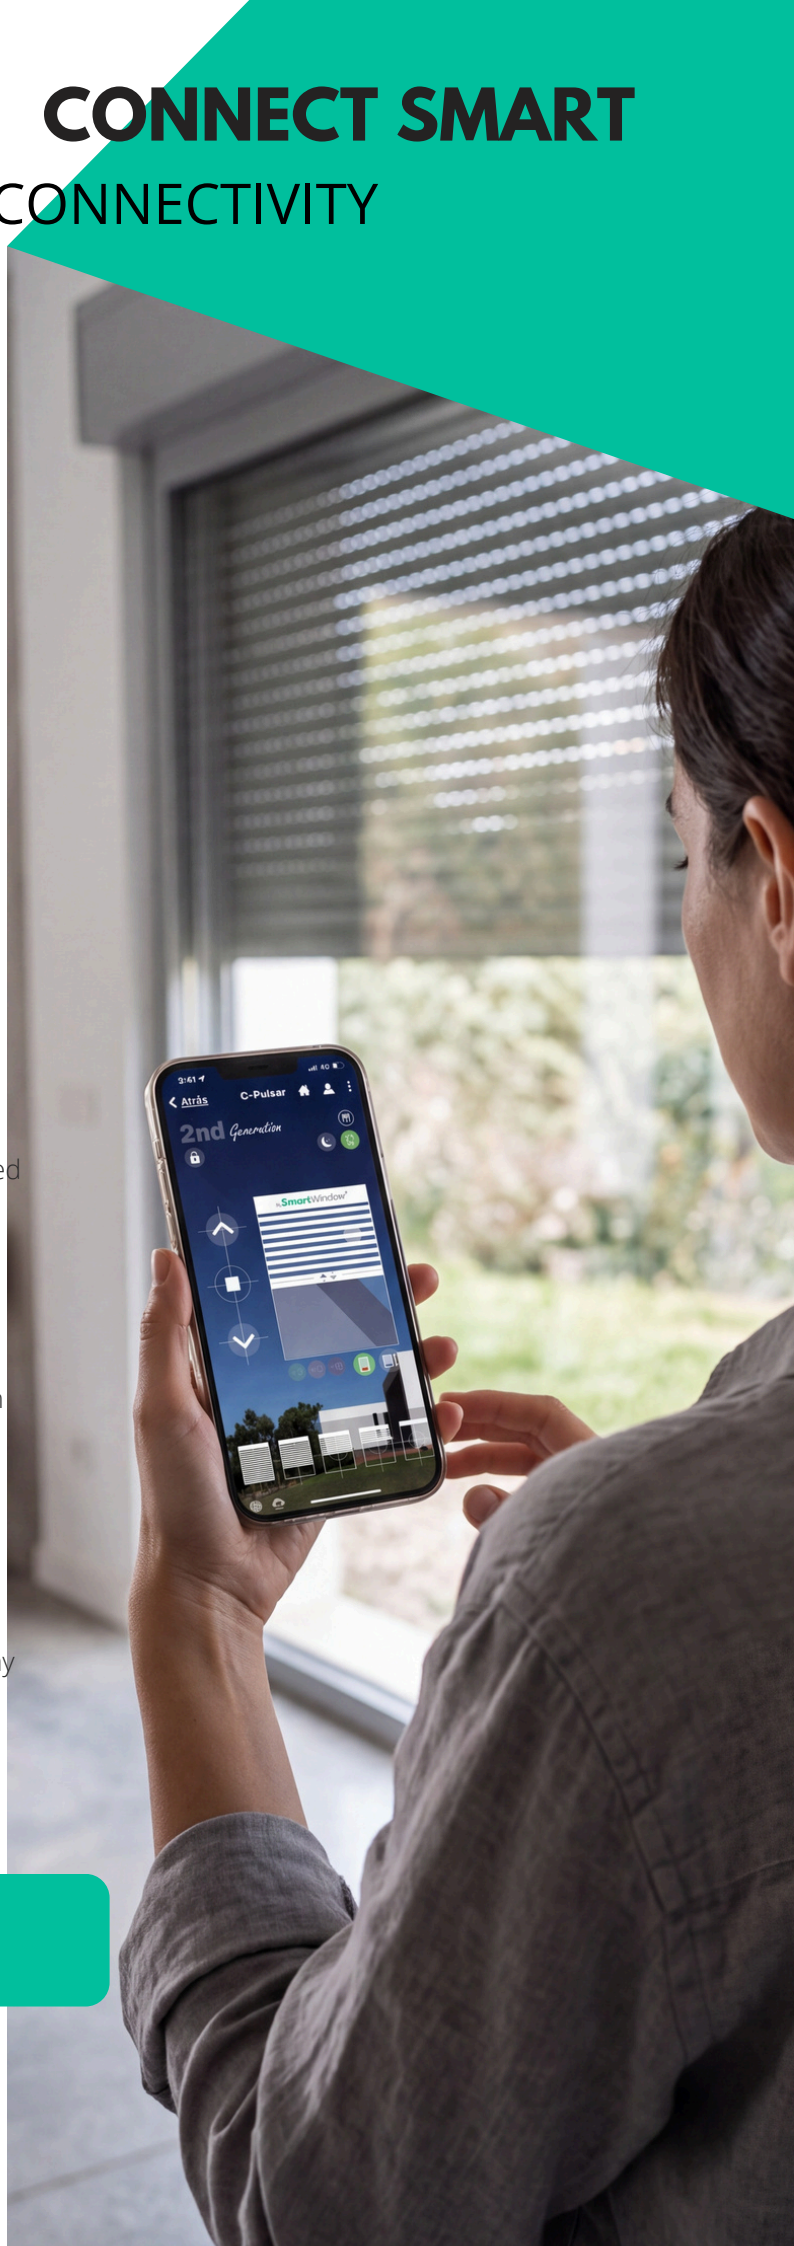

If the internet connection is lost, the system can continue operating locally through the App.

Control reversal

Corrects motor direction and Twin Digital display if the wiring has been connected in reverse.

No machining required - CONNECT SMART is concealed inside the shutter.

EVO

ALARMS - 3 COLOURS

Black White Silver

2 versions available

Connect EVO: Shutter control + security

Connect EVO PLUS: IAQ + Security + Shutter

Opening alarm

Monitor opening status or activate alarms when you are away.
